RE Ridgeview Estate - Pesticides Study

Dear Mr. Brown,

Just a short note to keep everyone informed on what has happened since the November 4th meeting.

1. You are all aware water samples have been collected and stored for analysis. Water chemistry and pesticides results are expected early in January. More water may be needed for nutrient analysis, samples will probably be collected in January.
2. Paul Beck with M.O.E. Groundwater Quality Section, Water Resources Branch, has been in the area. To complete his work he would like the enclosed questionnaire to be completed by each homeowner. Please return the questionnaire to this office as soon as possible. Because of the time of the year visual inspection of each property was impossible. A diagram of your property is needed to complete the groundwater study.
3. An extensive literature research of pesticides solubility and persistence in target areas is underway and should be completed by January.
4. The next meeting is scheduled for February 18, 1988. Time and place will be announced later.

Yours truly

Robert B. Cameron
District Pesticides Officer
